

Mobile Point

Mobile Point is a virtual money transaction platform with advanced security and the latest features. In this mobile app along with "Send money", "Recharge balance" we have to bring some special features. In order to assure every account's security, we have introduced a smart password and biometric verification system with this app. With this app, money can be transfer and receive from a bank account, cards. Generally, people have to pay a minimum amount of fee for cashout and send money process but most interestingly they can avoid this payment option by watching advertisement provided on the app. This is a dream project from team "Innovative Soul".
